

Abstract of the Disclosure

A communication system includes a communication device provided with an accessing system capable of accessing web pages. At least one operation member which is operable with being attached to the communication system is provided. The operation member has a data storage containing first access data which is used by the communication device to access a first predetermined web page. The system includes a transmitting system that transmits the first access data contained in the data storage to the accessing system when the at least one operation member is operated while it is attached to the communication device. In this configuration, the accessing system accesses the first predetermined web page based on the first access data transmitted from the data storage of the at least one operation member.
